

ENVIRONMENTAL POLICY

Kelvin Hughes' activities include the design, manufacture, sales and after-sales of radar surveillance systems and the supply of marine data to a global market.

Kelvin Hughes is committed to conserving the environment and treating natural resources with care and respect. This applies as much to our products as to our processes.

Kelvin Hughes is committed to preventing pollution and to protecting the environment as far as is reasonably practical, this means we will:

- Comply with applicable legal requirements and with other requirements to which the organisation subscribes, which relate to its environmental aspects
- Establish a framework for setting and reviewing environmental objectives and targets, which will form our continual improvement programme. The objectives and targets documented and updated on a regular basis
- Apply design standards promoting the use of environmentally friendly processes and materials that encourage development of products that can be reused, recycled or disposed of safely
- Promote reduction in the consumption of all materials, whilst encouraging reuse, recycling, and the use of recycled materials wherever possible
- Where possible design energy efficiency into new products, services and facilities, and manage energy in all areas of the business
- Promote environmental awareness, responsibilities and the use of appropriate technology with all employees, other people who work on behalf of Kelvin Hughes, and include those issues in training programmes throughout the Company
- Seek to reduce the impact of the business on the local environment and at all times be a good neighbour in the community
- Publish this policy on the Kelvin Hughes website
- Aim to have zero percentage of our waste going into Landfill sites

Kelvin Hughes administers this policy to enable good management practices to be developed and maintained, and demonstrates this through certification to the latest Environmental Management System standard, ISO 14001.
